This refreshing teaching/learning narrative,
based on actual life events and research-
supported principles, begins with the lead
character (Joanne Cruse) losing her job as the
Safety Director for a large manufacturing
company. Subsequently, her former psychology
professor, Dr. Pitz ("Doc"), invites her to try out
for a position as leadership consultant with his
firm, Make-A-Difference, Inc. (MAD) that helps
companies cultivate a self-motivated and
personally-engaged workforce. Throughout her
probationary period, Joanne travels with the top
consultant at MAD (Mickey Vasquez) to visit a
number of organizations struggling with
various occupational issues related to the
human dynamics of self-motivation (i.e.,
working to accomplish an organization's
milestone from a self-directed or self-
accountability mindset). The interpersonal and
group interactions Joanne experiences at
diverse organizations, accompanied by
Mickey's professional coaching, reveal twenty

practical and profound leadership lessons to
nurture an actively caring for people work
culture in which employees put forth their best
efforts on behalf of their company's mission.
Petroleum refiners must face billion-dollar
investments in equipment in order to meet
ever-changing environmental requirements.
Because the design and construction of new
processing units entail several years' lead time,
refiners are reluctant to commit these dollars
for equipment that may no longer meet certain
conditions when the units come on stream.
Written by experts with both academic and
professional experience in refinery operation,
design, and evaluation, Petroleum Refining
Technology and Economics, Fifth Edition is an
essential textbook for students and a vital
resource for engineers. This latest edition of a
bestselling text provides updated data and
addresses changes in refinery feedstock,
product distribution, and processing
requirements resulting from federal and state
legislation. Providing a detailed overview of
today's integrated fuels refinery, the book
discusses each major refining process as they
relate to topics such as feedstock preparation,
operating costs, catalysts, yields, finished

product properties, and economics. It also contains end-of-chapter problems and an ongoing case study. The extraction of oil and gas from offshore continental shelves constitutes one of the most dynamic sectors of global petroleum development. It is also one of the most complex. Atlantic Canada is no exception, and the history of Scotian Basin petroleum over the past half century reveals a fascinating series of political challenges, accommodations, and settlements. Peter Clancy's comprehensive analysis of petroleum politics in Nova Scotia demonstrates the complex intergovernmental and intercorporate relationships, ecological concerns, and Aboriginal interests that have complicated offshore development. His incisive analysis of the complex politics at play provides new insights into the unique challenges facing the petroleum industry in Atlantic Canada.

Managing Business Ethics: Making Ethical Decisions teaches students how to navigate ethical issues they will encounter using the weight-of-reasons approach applied throughout the book. This decision-making framework's goal is not to faithfully apply particular philosophical perspectives on what is right, but rather to solve ethical problems. Authors Alfred A. Marcus and Timothy J. Hargrave underscore the need for employees at all levels to carefully consider the ethical implications of their actions using this approach and it can be applied at the individual, organizational, and stakeholder levels. Each chapter provides a

case to walk through application of the framework and mini-cases allow students to practice applying this framework on their own. A wide range of real-world case studies are presented, featuring companies such as Facebook, Google, Wells Fargo, Volkswagen, and Amazon. This practical, down-to-earth text also delves into topics not covered extensively by other books such as *slow and fast thinking*, the inherent conflict between the individual and organization, conformity, and the difficulties of speaking truth to power. Students are offered ample opportunity to engage in thoughtful reflection, discussion, and application as they grapple with ethical issues big and small.

Angola Company Laws and Regulations Handbook - Strategic Information and Basic Laws "Given the number and calibre of the companies that expressed interest in our maiden oil and gas licensing round, it suffices to say that Ghana's oil and gas industry is attractive and promising." Hon. John Peter Amewu, Minister of Energy

The Oil & Gas Year Ghana 2020 delves into the country's developments a decade after first oil. This year's edition covers a range of topics, including the country's first-ever licensing round, measures aimed at boosting investor confidence, the government's plans to turn Ghana into a regional logistics and petroleum hub, the increasing role gas is playing in the country's energy mix and the achievements of the local content law since its enactment in 2013. "The exciting aspect about this

achievement [the Afina-1x well discovery] is that it's not just for Springfield, but is for the entire continent - to say that Africans can do things and we do them very well once we put our minds to it. We think that this will unleash the potential of Africa." Kevin Okyere, Founder and CEO of Springfield Group, TOGY Ghana 2020 Indigenous Company of the Year Ghana is putting the pieces in place to increase its energy profile on the African continent, such as expanding E&P activities to reach 500,000 bopd by 2024, initiating policies to increase transparency in the awarding of blocks and ultimately creating a regional hub for the hydrocarbons industry. Produced in partnership with the Ministry of Energy, this fourth edition of *The Oil & Gas Year Ghana* provides insight to investors and companies looking at strategic opportunities in the country at a time when Ghana's oil and gas industry is aiming to double production. The theoretical arguments for environmental taxes and other types of economic instruments for environmental protection have been discussed extensively in the literature. Rather less well discussed has been the extremely complex form that such instruments have in fact taken in practice.

Environmental Taxation Law: Policy, Contexts and Practice examines the legal implications of introducing environmental taxes and other economic instruments into the regulatory framework of UK law. In doing so, it analyzes and explains the difficulties of grafting environmental taxes onto the complexities of

existing regulatory structures, not all of which, of course, were originally devised with environmental considerations in mind. Although the focus of the book is the UK's pioneering implementation of a web of distinct yet interrelated policy measures, it locates the UK's taxes and instruments not simply in their broader context of market and environmental regulation, but also in the contexts of European and international law. Suitable for both aspiring process technicians and active process technology professionals, this wide-ranging guide provides a thorough grounding in the history, science, technology, equipment, systems, operations, and troubleshooting principles associated with modern manufacturing. Following years of widespread use and testing, INTRODUCTION TO PROCESS TECHNOLOGY, Fourth Edition, is a proven product featuring a logical sequence of topics—including safety, instrumentation, applied physics and chemistry, and quality control—aligned to the structure of accredited college courses and professional training programs. Technically accurate and up to date, the Fourth Edition remains affordable, reader-friendly, and highly visual, with ample illustrations and photographs to make complex technical concepts easier to understand and apply. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. Process Plant Layout, Second Edition, explains the methodologies used by

professional designers to layout process equipment and pipework, plots, plants, sites, and their corresponding environmental features in a safe, economical way. It is supported with tables of separation distances, rules of thumb, and codes of practice and standards. The book includes more than seventy-five case studies on what can go wrong when layout is not properly considered. Sean Moran has thoroughly rewritten and re-illustrated this book to reflect advances in technology and best practices, for example, changes in how designers balance layout density with cost, operability, and safety considerations. The content covers the 'why' underlying process design company guidelines, providing a firm foundation for career growth for process plant designers in contracting, consultancy, and for operating companies at all stages of their careers, and is also of importance for operations and maintenance staff involved with a new build, guiding them through plot plan reviews. Based on interviews with over 200 professional process plant designers Explains multiple plant layout methodologies used by professional process engineers, piping engineers, and process architects Includes advice on how to choose and use the latest CAD tools for plant layout Ensures that all methodologies integrate to comply with worldwide risk management legislation A free open access ebook is available upon publication. book, medical anthropologist Holly Wardlow takes readers through a ten-year history of the AIDS epidemic in Tari, Papua New Guinea, focusing on the political and economic factors that make women vulnerable to HIV and on their experiences with antiretroviral therapy. Alive with the women's stories about being trafficked to gold mines, resisting polygynous marriages, and struggling to be perceived as morally upright, Fencing in AIDS demonstrates that being female shapes every aspect of the AIDS epidemic. Offering crucial insights into the anthropologies of mining, ethics, and gender, this is essential reading for scholars and professionals addressing the global AIDS crisis today. Work-related injuries, such as back injuries and carpal tunnel syndrome, are the most prevalent, most EXPENSIVE, and most preventable workplace injuries, accounting for more than 647,000 lost days of work annually (according to OSHA estimates). Publishing one themed volume a year, the publication provides a resource detailing the latest methods in the field of chemical process safety. Helps acquaint the reader/researcher with the fundamentals of process safety Provides the most recent advancements and contributions on the topic from a practical point-of-view Presents users with the views/opinions of experts in each topic Includes a selection of the author(s) of each chapter from among the leading researchers and/or practitioners for each given topic For rulers whose territories are blessed with extractive resources -- such as petroleum,

metals, and minerals that will power the clean energy transition -- converting natural wealth into fiscal wealth is key. Squandering the opportunity to secure these revenues will guarantee short tenures, while capitalizing on windfalls and managing the resulting wealth will fortify the foundations of enduring rule. This book argues that leaders nationalize extractive resources to extend the duration of their power. By taking control of the means of production and establishing state-owned enterprises, leaders capture revenues that might otherwise flow to private firms, and use this increased capital to secure political support. Using a combination of case studies and cross-national statistical analysis with novel techniques, Mahdavi sketches the contours of a crucial political gamble: nationalize and reap immediate gains while risking future prosperity, or maintain private operations, thereby passing on revenue windfalls but securing long-term fiscal streams.
