The Dewey Decimal Classification system (DDC) is the world's most popular library classification system. The 23rd edition of the DDC was published in 2011. This second edition of *The Theory and Practice of the Dewey Decimal Classification System* examines the history, management and technical aspects of the DDC up to its latest edition. The book places emphasis on explaining the structure and number building techniques in the DDC and reviews all aspects of subject analysis and number building by the most recent version of the DDC. A history of, and introduction to, the DDC is followed by subject analysis and locating class numbers, chapters covering use of the tables and subdivisions therein, multiple synthesis, and using the relative index. In the appendix, a number of academically-interesting questions are identified and answered. Provides a comprehensive chronology of the DDC from its inception in 1876, to the present day Describes the governance, revision machinery and updating process Gives a table of all editors of the DDC Set of rules for DC practice, based on the 16th edition, designed to assist small libraries as well as library school students. First published in 1980, *Steel-Engraved Book Illustration in England* is a detailed and comprehensive survey of the steel engravings that were so popular in the nineteenth century. With an extensive range of illustrations, the book refutes the assumption that steel engravings are of little artistic value or importance, a common attitude rooted largely in the connection between steel engravings and mass-produced books. Beginning with an exploration of the identification problems and early history of steel engravings, it moves through the production and printing of the plates and on to a study of several engravers and artists, as well as of the books themselves. *Steel-Engraved Book Illustration in England* will appeal to anyone interested in the history of printing and illustration. ?This 2021 version of the Dewey Decimal Classification. *DEWEY DECIMAL CLASSIFICATION, 2021 (Relative Index) (Volume 4 of 4)* Classification: What It Is and What It Does Classification provides a system for organizing knowledge. Bank Street College of Education Best Book of the Year Who was Melvil Dewey? Learn how Dewey's love of organization and words drove him to develop and implement his Dewey Decimal system, leaving a significant and lasting impact in libraries across the country. When Melvil Dewey realized every library organized their books differently, he wondered if he could invent a system all libraries could use to organize them efficiently. A rat-a-tat speaker, Melvil was a persistent (and noisy) advocate for free public libraries. And while he made enemies along the way as he pushed for changes—like his battle to establish the first library school with women as students, through it all he was EFFICIENT, INVENTIVE, and often ANNOYING as he made big changes in the world of public libraries—changes still found in the libraries of today! This work traces recent developments in the Dewey Decimal Classification and points to those characteristics which appear to be shaping its future. Although designed for use with previous editions of DDC, this offers reliable explanation and drill. The present study is more concerned with differences between DDC 19 and DDC 20. This combined text and workbook covers the theories and principles of DDC's 23rd edition and then offers immediate practice in putting the information to use. Plentiful, clear explanations, examples and practice exercises illustrate every aspect of DDC and help students master creating DDC numbers.
