The nursing profession is under pressure. Financial demands, student debt, the target culture, political scrutiny in the wake of major care scandals and increasing workloads are all taking their toll on professional morale and performance. This timely book considers the meaning of resilience in this adverse context and explains why measures to preserve individual nurses' and students' well-being are flawed if they don't take into account wider political and organizational perspectives. Arguing that healthcare can be thought about and experienced differently, this book: provides a summary of the latest research on resilience, explaining its relevance and also limitations for nurses; considers debates about compassion and highlights the effects of policy agendas on nurse education and nursing work; re-evaluates nursing's professional identity, including where nursing has come from and the effects of class, gender and race on its powerbase; assesses the role of politics and social media, both in driving change and feeding resistance; and introduces the idea of critical resilience as a complete framework for resisting bullying and fostering survival and change in the nursing workforce. Direct, upbeat, at times provocative and witty, this agenda-setting book enables nurses to understand why they feel the way they do. It also lists what opportunities are available to them to change, resist and survive in what has become a complex, challenging – if still deeply rewarding – line of work. Here's a practical guide for nurses in helping patients make a transition from one care setting to another. Focuses on DRGs and the critical need for planning and teamwork resulting from early discharge. Provides checklist to help ensure continuity of care, as it relates to health promotion, recuperation, short- and long-term rehabilitation, chronic disease, institutional care, and terminal illness. Also includes legal and ethical considerations. Medicines Management provides a concise exploration of the nurse's role in medicines management. It explains what is meant by medicines management, discusses the current professional and legal context, gives insight into the reasons why mistakes are made, and focuses on the principles of safe drug administration. This open access book aims to primarily support nurses as leaders and champions of multimodal, Interdisciplinary nutrition care for older adults. A structured approach to fundamentals of nutrition care across Interdisciplinary settings is combined with additional short chapters about special topics in geriatric nutrition. The book is designed to provide highly accessible information on evidence-based management and care for older adults, with a focus on practical guidance and advice across acute, rehabilitation, and primary and secondary malnutrition prevention settings. The cost of malnutrition in England alone has been estimated to be 119.6 billion per year, or more than 15% of the total public expenditure on health and social care. ^65 years). The importance and benefit of specialised nutrition care, delivered by experts in field, is well established for those with complex nutrition care needs. However, despite the substantial adverse impact of malnutrition on patient and healthcare outcomes, specialised management of this condition is often under-resourced, overlooked and under-prioritised by both older adults and their treating teams. As an alternative, timely, efficient, and effective supportive nutrition care opportunities may be appropriately implemented by nurses and non-specialist Interdisciplinary healthcare team members, working together with nutrition specialists and the older adults they care for. Practical, low-risk opportunities should be considered across nutrition screening, assessment, intervention, and monitoring domains for many patients with, or at risk of malnutrition. Whilst a variety of team members may contribute to supportive nutrition care, the nursing profession provide a clear focal point. Nurses across diverse settings provide the backbone for Interdisciplinary teamwork and essential patient care. The nursing profession should consequently be considered best placed to administer Interdisciplinary, multimodal nutrition care, wherever specialist nutrition care referrals are unlikely to add value or are simply not available. As such, the book is a valuable resource for all healthcare providers dedicated to working with older patients to improve nutrition care. Why is care planning important?
