Clinical Correlates in Anatomy and Physiology (Second Edition) Dec 18 2022 One of the challenges for allied health students is correlating the information introduced in basic science classes to the clinical problems they see in the field. A good clinician in allied health is knowledgeable in anatomy, physiology, pathology and other science fields. They are able to quickly apply this knowledge to the clinical setting for good patient care. However, both students and instructors know that applying knowledge gleaned from basic science classes to their own clinical practice is not always easy. Using short vignettes, "Clinical Correlates in Anatomy and Physiology" illustrates clinical problems that align with the topics covered in a first year anatomy and physiology course. Students and instructors can use these vignettes to better understand the systems as they cover them in class. These illustrative examples pique student interest and serve as the basis for classroom discussion, as well as introduce the concepts of pathophysiology in the context of systems physiology. While designed for the allied health student, anyone with an interest in processes of health and disease will enjoy these short discussions illustrating clinical pathologies of systems physiology. Mary Katherine Lockwood received a B.S. in biology from Davidson College in North

Carolina, an M.S. in physiology from the Pennsylvania State University, and a Ph.D. in public health with a concentration in nutrition and biological chemistry from the University of California, Los Angeles. Dr. Lockwood is a Clinical Associate Professor in the Department of Molecular, Cellular, and Biomedical Sciences at the University of New Hampshire, where she teaches anatomy and physiology and clinical nutrition. In addition, she is licensed in New Hampshire as an Instructor/Coordinator for Emergency Medical Services, teaches emergency medicine and CPR, and responds with a 911 ambulance service as an Advanced EMT.

Mastication and Swallowing Oct 24 2020 Mastication and Swallowing are functions common to most forms of animal life, yet there exists much uncertainty as to their

biological basis, and a diversity of opinion on the treatment of disorders of the mastication and deglutitory apparatus. During the last fifteen years there has been a considerable increase in research into clinical aspects related to these two vital functions, and also into their underlying biological, and especially neurophysiological, mechanisms. This volume presents the edited proceedings of a symposium held in 1974 in Vancouver, British Columbia, attended by scientists from several countries who are actively involved in such research. In addition to a broad, up-to-date coverage of its subject, Mastication and Swallowing stresses conceptual aspects and suggests lines of future clinical and basic research.
