With Windows 8, Microsoft completely reimagined the graphical user interface for its operating system, which now runs on both desktop PCs and tablets, but the overhaul was not without hitches and its dueling UIs (one designed for touch, the other for keyboards and mice) created significant confusion for users. A detailed description of MH, a message handling system built on the UNIX time-sharing system that enables users to compose, send, receive, store, retrieve, forward, and reply to messages. The design of MH is based on a different approach than is usually used for large systems. The command interface to MH is the UNIX 'shell' (the standard UNIX command interpreter), and each message handling activity is a separate command. Each program is driven from and updates a private user environment which contains information permitting MH to be custom tailored. MH stores each message as a separate file and utilizes the tree-structured UNIX file system to organize groups of files into directories, or 'folders.' All UNIX facilities for dealing with files and directories are applicable to messages and folders, obviating the need for code that duplicates the supporting-system facilities. This report will familiarize non-users with the general features of message handling systems, and it provides a complete user's manual for system users. (Author). An exploration of how ordinary U.S. Christians come to feel globally connected through the multibillion-dollar child sponsorship industry Christian Globalism at Home looks at the massive charitable industry that is Christian child sponsorship, from its growth in nineteenth-century Protestant missions to its status as one of today's most profitable private fundraising tools. Investigating two centuries of sponsorship and its related practices in American living rooms, churches, and shopping malls, Hillary Kaell examines the myriad ways that Christians who don't travel outside of the United States have cultivated global connections, and the ethical and ideological questions involved. Popular child sponsorship organizations, including World Vision, Compassion International, and ChildFund, raise billions of dollars and circulate millions of letters and photos around the world annually. Kaell traces the movement of money, letters, and images, along with a wide array of the lesser-known techniques of sponsorship, such as playacting, hymn singing, eating, and fasting. She shows how, through this process, U.S. Christians attempt to hone globalism of a particular sort by oscillating between the sensory experiences of a God's eye view and the intimacy of human relatedness. These global aspirations are buoyed by grand hopes and subject to intractable limitations, since they so often rely on the inequities they claim to redress. Based on extensive interviews, archival research, and fieldwork, Christian Globalism at Home explores how U.S. Christians imagine and experience the world without ever leaving home. All manner of models are used to describe, simulate, extrapolate, and ultimately understand the function of dynamic systems. These sorts of models are usually based upon a mathematical foundation that can be difficult to manipulate especially for students. Modeling for All Scales uses object-oriented programming to erect and evaluate the efficacy of models of small, intermediate and large scale systems. Such models allow users to employ intuitively based symbols and a systems ecology approach. The authors have been leaders in the systems ecology community and have originated much of the scientific vocabulary of the field. After introducing modeling and its benefits, there is a series of chapters detailing the more particular elements of successful simulation.
