explores a transdisciplinary notion of media and technology, exploring media as technology, with special attention to its material, historical and ecological ramifications. The authors reconceptualize media from environmental, ecological and systems approaches, drawing not only on media and communication studies, but also philosophy, sociology, political science, biology, art, computer science, information studies and other disciplines. Featuring a group of internationally known scholars, this collection

explores evolving definitions of media and how media technologies are transforming theory and practice. As the current media includes a wider and wider range of concepts, products, services and institutions, the definition of media continues to be in a state of flux. What are media today? How is media studies evolving? How have technologies transformed communication and media theory, and informed praxis? What are some of the futures of media? The collection challenges traditional notions of media, as well as concepts such as freedom of expression,

audience empowerment and participatory media, and explores emergent media including transmedia, virtual reality, online games, metatechnology, remediation and makerspaces. The book's primary readership will be academics, scholars and students in media and communication studies, including a wide range of undergraduate and graduate courses in media studies, communication studies and new media. Suitable for classroom use in the areas of philosophy of communication and media, media theory, media ecology, cultural studies, media

archaeology, feminist studies and political economy of communications and media. In recent decades, companies around the world have deployed an arsenal of tools - including IP law, hardware design, software restrictions, pricing strategies, and marketing messages - to prevent consumers from fixing the things they own. While this strategy has enriched companies almost beyond measure, it has taken billions of dollars out of the pockets of consumers and imposed massive environmental costs on the planet. In *The Right to Repair*, Aaron Perzanowski analyzes the history

of repair to show how we've arrived at this moment, when a battle over repair is being waged - largely unnoticed - in courtrooms, legislatures, and administrative agencies. With deft, lucid prose, Perzanowski explains the opaque and complex legal landscape that surrounds the right to repair and shows readers how to fight back. A science journalist travels the world to explore humanity's ecological devastation—and its potential for renewal in this “compelling read” (Guardian, UK). We live in times of profound environmental change. According to a growing scientific consensus, the dramatic results of man-made climate change have ushered the world into a new geological era: the

Anthropocene, or Age of Man. As an editor at Nature, Gaia Vince couldn't help but wonder if the greatest cause of this dramatic planetary change—humans' singular ability to adapt and innovate—might also hold the key to our survival. To investigate this provocative question, Vince travelled the world in search of ordinary people making extraordinary changes to the way they live—and, in many cases, finding new ways to thrive. From Nepal to Patagonia and beyond, Vince journeys into mountains and deserts, forests and farmlands, to get an up close and

personal view of our changing environment. Part science journal, part travelogue, *Adventures in the Anthropocene* recounts Vince's journey, and introduces an essential new perspective on the future of life on Earth.
