Sanctified Trial Oct 18 2019 "This diary is distinctive for its account of increasing clashes with Unionist "bushwhackers" and for its graphic description of the atrocities on both sides. The Civil War surged around Rogersville, near the Fain farm, with alternating occupation by both North and South. When her farm was looted in 1865, Fain attempted to defend her family and home from depredations by both Yankee troops and guerrillas." "The entries from the period of Reconstruction reveal Fain's concerns about perceived threats from poor whites and freed slaves. Overall, however, this busy mother focuses throughout on the private life of her family, and her writings tell us much about the challenges of everyday life almost a century and a half ago."--Jacket.

Paediatric Pathology Apr 04 2021 The increased provision of facilities for neonatal and paediatric care in the last 25 years has been accompanied only in part by appropriate developments in

pathology. Specialist pathologists are many fewer than paediatric departments, and details of the advances in knowledge of the pathogenesis of diseases in childhood and of ways of investigating them are not uniformly available. In many institutions an individual with a special interest rather than a special training will be responsible for paediatric pathology and it is to this group of histopathologists that this text is addressed. For this reason it is not written as a comprehensive text and is not intended for use as a reference volume. Areas which may produce particular difficulties for the individual with little specialist knowledge of the very young (e. g. the lung) are dealt with in more detail and, in general, entities in which the histopathology does not differ greatly from that of the adult disease are considered briefly. A brief account of developmental processes is included where prenatal considerations are helpful in understanding a particular entity. A number of specialist topics which are known to trouble those who work in non-specialist departments are described fully (diseases of muscle) or with guides to investigation (metabolic disease). The value of investigation and careful description of abnormalities of development is also emphasized. The authors are from different backgrounds, paediatric pathologists (J. W. Keeling, J. Cox), pathologists in general departments with extensive experience in paediatric pathology (c. L.

Hand of God Nov 18 2019 Lois Stovall Williams writes a tender, Christ-centered memoir of her husband, Anderson James Williams, a physician dedicated to serving the African-American community. In spite of segregation in the South, Anderson rose to preeminence in his field of pathology. After serving in the Army, he graduated from Meharry Medical College. He was Chief of Pathology at Norfolk Community Hospital. In later life, he headed the AJ Williams Medical Corporation, serving fellow veterans with disabilities, helping them obtain compensation for their service-connected exposures and injuries. Lois, in her memorial, says, "Before I knew Anderson, I was independent, ambitious, and assertive. When I met Anderson, I saw interior capacities I had never seen before. Anderson was soft spoken and kind. He was a good listener and anticipated the needs of others with sincerity and charity. Anderson's love guided me to greater heights in life."

Updates in Diagnostic Pathology Mar 03 2021 by CDs, but we continue to utilize the same general format of morning didactics and afternoon glass slide review and small group interactions. One of our biggest successes was in the ever-expanding set of didactic lecture notes and radiologic, gross, microscopic, ultrastructural, and other images that course participants received, so it wasn't much of a surprise when we were approached by the publisher to consider creating an updated compilation of some of the best talks and packaging them in a monograph available to a broader population of physicians and scientists. With the extraordinary attention to detail that he is known for, my co-editor David Chhieng has been both the brains and the brawn of this project, resulting in the bringing together of such a collection while trying to be sensitive and representative of the various branches of pathology reflected in the actual course. From surgical pathology, chapters cover select topics in endocrine, gynecologic, GU, and GI pathology with contributions from Walter Bell, Michael Conner, Katrin Klemm, and Audrey Lazenby, respectively. Tom Winokur has begun to prepare us for the near future with a treatise on molecular markers in breast cancer. The interactive nature of cytopathology and surgical pathology are brought together by Claudia Castro [now at the U. T. Medical Branch at Galveston] and David Chhieng in three chapters covering mediastinal, pleural, and pulmonary pathology.
